

Assignment 4

Instructions

- Write command and execute and paste screen shots of the query as well as output and make a pdf.
- Submit one file .pdf file containing all answers. The name should be
- <roll_no>_assignment<number>.pdf
- Write the questions before the answers.
- The code should be executable and show output.
- Use DVD Rental Database used in assignment 2 to do the following tasks.
- For the questions that ask to create a view also list the entire content of the view after creating it.

Questions :

1. List the name language and category name of all the movies that have a rental rate below 3.
2. List the name of all movies acted by the actors with first name 'Burt' also display the last name of the actor in each row.
3. List all the addresses from the table address.if there is staff living in the address list their names as well in the same row.
4. Create a view with the First name, last name, email, phone number and address of all active customers with store id 1.
5. Create a view with film name, category name and language. List all rows from this view.
6. Create a view with the list of all distinct languages an actor has acted. The view should include: Actor's first name, last name and the languages he worked.
(it would be better if actor has only one row entry with the language colum stores all distinct language acted by him/her in the same cell)
